                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: Transferring are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport of iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a further role in stimulating cell proliferation.

SUBCELLUAR LOCATION: Secreted protein.

SUBCELLUAR LOCATION: Sepressed by the liver and secreted in plasma. MISCELLANBOUS: The peptidase 560 domains do not have protease
                                                                                                                                                                                                                                                                                                     function as the catalytic residues are missing. SIMILARITY: Belongs to the transferrin family. SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BOVIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P19134; LJNF.

SUBCELLULAR LOCATION: Secreted protein.
TISSUE SPECIFICITY: Expressed by the liver and s
MISCELLANEOUS: The peptidase S60 domains do not
function as the catalytic residues are missing.
SIMILARITY: Belongs to the transferrin family.
SIMILARITY: Contains 2 peptidase S60 domains.
                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Transferrins are iron binding transport proteins which can bind two Fe(3+) ions in association with the binding of an anion, usually bicarbonate. It is responsible for the transport iron from sites of absorption and heme degradation to those of storage and utilization. Serum transferrin may also have a furth

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

                                                                                                                                                       The present invention describes an assay for a protein having at least two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a proteolytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by proteolysis. Also described is a kit for the assay method comprising the proteolytic enzyme and a substrate bound specific binding partner (S1) for at least 2 of the isoforms of the proteins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method avoids use of antibodies for distringuishing between glycosylated isoforms of the proteins. The present sequence represents a transferrin peptide fragment which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, whice lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Assay for differentiating protein isoforms to determine their concentrations in sample e.g. blood, involves contacting the sample with proteolytic enzyme to produce peptide fragment by proteolysis followed by

                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an assay for a protein having at least two isoforms with different glycosylation patterns. The assay involves contacting a sample containing the protein with a proteolytic enzyme, followed by detecting the content or relative content of at least one peptide fragment produced by proteolytis. Also described is a kit for the assay method comprising the proteolytic enzyme and a substrate bound specific binding partner (S1) for at least 2 of the isoforms of the proteins. The method can be used for assaying isoforms of proteins according to their glycosylation pattern to determine their concentration or relative concentration in the sample or material (e.g. blood). The method avoids use of antibodies for distinguishing between glycosylated method avoids use of antibodies for distinguishing between glycosylated

                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel isolated marker for rheumatoid arthritis selected from one of many (around 400) markers defined in the specification. Rheumatoid arthritis is a chronic inflammatory disorder of the small joints which is estimated to affect 2.1 million people in the United States alone. Current approaches to treat the disease include the use of non-steroidal antinflammatory drugs (NSAIDS), which may reduce pain, swelling and inflammation, and disease-modifying anti-rheumatic drugs (DMARDS), which act to slow the progression of the disease and avoid further joint injury. These drugs are associated with a number of serious side effects and the search for improved therapeutics is a subject of active research. The marker of the invention demonstrates antiarthritic activity and may be useful in preparing a composition for diagnosing or treating rheumatoid arthritis. The current sequence is that of a human rheumatoid arthritis marker peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated marker for rheumatoid arthritis, useful in preparing composition for diagnosing or treating rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               manufacture comprising a computer readable media with computer-readable instructions for carrying out the method. The method is useful for analyzing a mixture of proteins. The method is useful for screening and characterization of protein mixtures. This sequence represents a human serum albumin (HSA) peptide fragment used in the novel protein analysis method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a novel method for analyzing a mixture of proteins. The method involves selecting sets of peptides from several peptides. Sequencing one or more portions of the peptides in two or more sets of peptides, to produce a data set, and determining the likelihood of the presence of two or more proteins in the mixture of proteins based on two or more data sets. The invention further comprises an article of

The protein of the invention is over-expressed in certain cancers. The compounds of the invention may have cytostaric activity and the sequence of the 1612F10B protein, and the gene which encodes it, may be useful for gene therapy or the development of a vaccine. The composition and methods of the invention are useful in diagnosing, preventing and treating cancer. The present sequence is the amino acid sequence of a peptide derived from the human 16192F10B variant 3 protein and used in the exemplification of the invention.
The invention relates to peptide antagonists of tissue Factor VIIa (tFVIIa) and a method of inhibiting FVIIa activity by contacting FVIIa with the peptide in the presence of tissue factor and under conditions that allow binding of the compound to FVIIa to occur. The peptides are useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, stroke, atherosclerosis, or septicaemia. The present sequence represents a tFVIIa peptide antagonist of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tissue Factor VIIa; tFVIIa; chronic thromboembolic disease; fibrin formation; vascular disorders; deep venous thrombosis; arterial thrombosis; stroke; atherosclerosis; septicaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                New peptide, useful for preventing or treating chronic thromboembolic diseases or disorders associated with fibrin formation including vascular disorders, such as deep venous thrombosis, arterial thrombosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2004-356247/33.

                                    CC arthritis (RA) using two-dimensional electrophoresis to generate a two-cdimensional array of features. The method can be used for screening, CC dimensional array of features. The method can be used for screening, CC diagnosis and prognosis of RA in a subject or for monitoring the effect of an anti-RA drug or therapy administered to a subject. The method CC comprises: (a) analysing a sample of serum or plasma and optionally CC synovial fluid by two-dimensional electrophoresis, to generate a two-cdimensional array of features; (b) identifying at least one chosen CC dimensional array of features; (b) identifying at least one chosen CC of RA; and (c) comparing the abundance of each chosen feature in the CC chosen feature or features in the sundance of the the abundance of the chosen feature in serum or plasma from CC chosen feature or features in the sample indicates the presence or CC chosen feature or features in the sample indicates the presence or CC diagnostic protein isoforms (RPIs), and for production of antibodies to CR and CR an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
The invention relates to zsig33-like peptides and their corresponding CC nucleic acids and methods for modulating gastric contractility, nutrient CC uptake, growth hormones, secretion of digestive enzymes and hormones. The cc sequences of the invention are used in the prevention, diagnosis and creatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA CC probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify complements of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent assay [BLISA)]. The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide is used in protein therapy. The present sequence coil is human zsig33-like peptide, zsig33-gamma peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local

                  immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and isolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anti-hypoglycaemic preparations containing glucose and as assorption enhancers for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as research reagents for the expansion, differentiation, growth factor and hormone secretion and/or
                                                                                                                                                                                                                                                                                                                                     The invention relates to zsig33-like peptides (ZS33LP) including zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and zsig33-epsilon peptides and nucleic acid molecules encoding such zsig33-like peptides. ZS33LP peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human infectious diseases, treating immunocompromised patients and treating immunocomp

These molecules are useful for treating dysfunction associated with contractile tissues or to suppress or enhance contractility in vivo and to treat gastrointestinal and growth related diseases. ZS31LP peptides, nucleic acids and/or antibodies are useful for treating disorders associated with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas and/or brain, gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33-gamma peptide
                          The invention relates to an isolated pro-apoptotic polypeptide, designated DIABLO, or its biologically active fragment of 8 amino acids in length. Also included are the polypuclectide encoding DIABLO, expression vectors, transformed host cells, producing a biologically expression vectors, transformed host cells, producing a biologically active fragment of DIABLO (by contacting an inhibitor of apoptosis (IAP) with a fragment of the polypeptide, and detecting a reduction in activity of the IAP), producing a natural or synthetic variant of DIABLO with cell
                                                                                                                                                                                                                                                                                                                                                  New pro-apoptotic polypeptide, useful for screening for agents which modulate cell death and for treating conditions associated with cell death or apoptosis e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Verhagen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   02-MAR-2001; 2001US-00798116

CC DIABLO in a biological sample (by contacting the sample with an IAP and CC detecting the presence of an IAP/DIABLO complex), modulating the death of CC a cell (by contacting a cell with an agent, which modulates the level CC and/or functional activity of a polypeptide), a composition for CC treatment/prophylaxis of a DIABLO related condition comprising an agent which reduces the level/activity of a polypeptide or DIABLO. DIABLO, or a CC mucleic acid encoding DIABLO, is useful for screening for an agent which cc modulates cell death. An antigen-binding molecule is useful for detecting CC DIABLO in a biological sample. The agent which modulates the level and/or functional activity of a polypeptide comprising mature or pro-human CC DIABLO polypeptide, is useful for the treatment and/or prophylaxis of a CC cancer, vascular disease, hepatic disease, autoimmune disease and CC cancer, vascular disease, hepatic disease, autoimmune disease and CC cancer vascular disease, hepatic disease, autoimmune disease and CC conditions associated with expression or activation of DIABLO, such as CC conditions associated with cell death or apoptosis. The present sequence CC represents a partial paptide sequence from human DIABLO, identified by protein sequencing of a protein (later identified as DIABLO) which co-cc precipitates with the human IAP protein MIHA (not defined)

This invention describes a novel protein construct comprising a La repressor peptide and a His3-20 linker peptide sequence or a LacI repressor peptide (AEF38804), its functional variant and a linker AEF38810) adapted to bind to support surface. The invention also describes; a) a nucleic acid encoding the construct; b) a vector comprising the nucleic acid and c) a kit comprising the construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and/or secretion of enzymes and/or hormones in the pancreas. They are also useful for treating diseases and conditions associated with bone formation (e.g. osteoporosis), immunity, obesity and metabolic disorders, dwarfism, wound healing, reproduction, as well as conditions associated with scress, kidney and lung dysfunction, aging and elderly, including, muscle strength, bone fragility and skin thickness, and neuroendocrine activities such as sleep. They are also useful for treating inflammation, diabetic gastroparesis, infectious disease, HIV, bacterial or viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diabetic gastroparesis, infectious disease, HTV, bacterial or viral infection, or cancer, for improving vaccines, and for stimulating an immune response. The present sequence is one such zeig33-like peptide of the invention. This sequence corresponds to residues 101-117 of the full
                                                                                                                                                                                                                                                                                                                                                        03-JUL-2004; 2004GB-00014987

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the gastrointestinal system. The zsig33-like peptides and coding sequences are useful for modulating gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC lyophilized form and a support surface. The construct comprises a fusion CC protein, in which the LacI repressor peptide is fused, and thus CC functionally bound to the linker peptide. The LacI repressor peptide CC comprises an NH 2 -terminal headpiece (AEF38806), a hinge region CC (AEF38807), an inducer binding domain (AEF38806), and a CCOH-terminal CC (AEF38803). The construct also comprises a reporter protein CC comprising at least a region of lacO operator or its variant which CC comprising at least a region of lacO operator or its variant which CC involves contacting DNA comprising a region of lacO operator sequence CC with the construct to form a DNA/protein complex, attaching the CC DNA/protein complex to a support surface, and eluting the DNA from the CC DNA/protein complex. The DNA to be purified comprises a) at least one of CC lacOl, lacO2, lacO3 sites, or its derivative or variant; b) is contained CC in a plasmid or a crude cell lysate. The support surface is adapted to CC bind to the construct and comprises a porous resin. Eluting is carried CC unt by washing the support to which the protein/DNA complex is attached, with an allosteric inducer of the LacI repressor protein (e.g. isopropyl-beta) the support surface. The construct salt. CC beta-D-thiogalactopyranoside or allolactose) in conjunction with salt. CC and effective isolation of highly pure DNA, and is cost effective. This sequence represents the E. coli LacI repressor protein hinge region, used to make the construct LacI-Hie6-GFP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC An isolated antibody has been developed which binds specifically to CC cytotoxic lymphocyte maturation factor (CLMP) and neutralises CLMF CC induced proliferation by more than 50% in a CLMF dependent T cell growth CC assay and/or inhibits binding of at least 60% of the factor to CC phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) CD blasts as determined in a CLMF receptor binding assay. CLMF is a CC heterodimeric protein having a molecular weight band of 75 kD, determined CC by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) CL under non-reducing and/or reducing conditions, providing a first subunit CC having a molecular weight band of 8 kD and a second subunit having a CC molecular weight of 35 kD. The present sequence represents a tryptic 40 kD CLMF peptide off polyvinylidene difluoride (PUDF), from an example of CC the present invention. The antibody can be used for the purification cand/or detection of CLMF. It is also used in therapeutic treatments which require selective blocking of proliferation and activation of cytotoxic T cells (CTLs) such as in transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

invention allows strong and selective cell adhesion and is useful as coating for scaffolds, e.g. implantable tissue scaffolds. The polypeptide may be coated on matrices implanted in damaged tissue (e.g. bone or cartilage) to increase the adhesion of desirable biological materials to the repair site. The scaffolds are useful for treating tooth and jaw defects (e.g. in cases of trauma, bone loss, tooth loss or gum disease) or cartilage defects (e.g. those that result from rheumatoid arthritis, osteoarthritis or trauma), or to repair defects and damage in skin, muscle and other soft tissue such as those that result from trauma, burns or ulcers. The present sequence represents a peptide composed of the scrambled sequence of human perlecan adhesion peptide. This peptide was used as a control for cell adhesion assays in the examples of the method
                                                            invention
